

## Solve.Care welcomes Jonathan Chou to Advisory board

(US, Delaware – Feb. 20)— Jonathan Chou, co-founder and CEO of the Bee Token, a tech entrepreneur who has worked with some of Silicon Valley's top innovators, has joined the [Solve.Care](#) Advisory board. Solve.Care is the first token sale to which Jonathan agreed to join.

Chou is co-founder and CEO of Bee Token, a company that's revolutionizing home-sharing via the use of blockchain technology. Chou is a thought leader in the cryptocurrency industry, who recently led Bee Token to achieve its presale ICO fundraising goal in less than five minutes, for a total of \$10 million. This makes the BEE Token one of the most sought after cryptocurrencies in the world.

Chou will lend his expertise to Solve.Care as it continues to innovate in its own use of blockchain [to reduce the enormous clinical and technology costs](#) that have such a considerable impact on affordability in the healthcare system. Further, as leaders in the blockchain and cryptocurrency industries, both Solve.Care and Bee Token are now exploring new partnership opportunities.

It is noteworthy that for the first time, Chou will be investing his own personal funds into the Solve.Care platform. "I am thrilled to join the Solve.Care board and help this truly innovative company continue to make healthcare and benefits programs work better for everyone involved in the healthcare system," said Chou. "This company has the potential to completely disrupt the way care is delivered around the world, using blockchain technology to ensure a better, more just and more affordable model that meets the needs of all consumers, providers and insurers. That's why among the hundreds of other token sales I took a decision to join Solve.Care. I look forward to beginning my work with the entire Solve.Care board and leadership team."

Solve.Care is a revolutionary platform that patients, employers, physicians, healthcare organizations and insurance companies can use to make care delivery more efficient, effective and affordable. It drastically improves care coordination, empowering individuals to effectively manage their healthcare decisions by replacing inefficient and duplicative systems and automating complex processes to save billions of dollars in costs per year.

The platform has also been proven to be effective at combating waste, fraud and abuse in the healthcare system, delivering unprecedented levels of accountability and transparency to the administration of medical care.

Solve.Care's primary product is Care.Wallet, an app that allows patients to make instant appointments with their doctors, more easily understand their insurance benefits, have access to medical records and review and pay bills. Employers can use the platform to

administer benefits, reduce costs and reward their employees, while physicians and hospitals can issue prescriptions, manage appointments and coordinate with specialists.

Before founding The Bee Token in October 2017, Chou [was as an engineer](#) for the global ride-sharing app Uber, serving as tech lead on fraud and machine learning in the company's cybersecurity department. He also played a key role in rewriting the new Uber app using Apple's Swift programming language.

With The Bee Token, Chou has co-founded the first decentralized home-sharing network that connects hosts with guests without taking a commission of any kind. Through its Beenest app, it offers a secure payment system that allows for the free exchange of services between two entities. It also has a decentralized arbitration system to resolve user disputes and a reputation system that utilizes digital fingerprint protocol on the Ethereum blockchain.

"It is an honor to welcome Jonathan to our board, as we believe his insights and background are perfectly suited to our company's mission and values," said Pradeep Goel, CEO of Solve.Care. "His extensive experience and groundbreaking research in using blockchain technology will help us better understand how we can deliver value to users, whether they are consumers, providers or insurance companies. This addition to our board marks a terrific step forward for Solve.Care."

### **About Solve.Care**

Solve.Care Foundation was established with the goal to revolutionize administration of healthcare and other benefit programs globally. The stated mission of Solve.Care is to **"Make healthcare and benefit programs work better for everyone."** The platform brings a relationship centric approach to care coordination, administration and payments that addresses all three pillars of healthcare: clinical, administrative and financial.

**Solve.Care platform** is designed to enable insurance companies, government agencies, hospitals and providers, pharmacies and businesses to build care coordination and delivery networks and engage their stakeholders. Solve.Care is launching a number of ground breaking innovations such as Care.Wallet, Care.Cards, Care.Coins, Care.Vault and Care.Protocol through their platform. Solve.Care is implementing the relationship centric approach by using distributed ledger technology and Blockchain.
